

XRPL Validator — Daily Engineering Report • 2026-06-15

Compiled retrospectively on 2026-09-23 from the git history. Scope: XRPL work only — the git history of [xrpl-validator](#) and the XRPL Rust SDK, the XRP Ledger itself (amendments) and XRPL research.

Summary

- **13 commits** (xrpl-validator 13)

Engineering changes

- **feat(validator): regenerate amendment vote list for rippled 3.2.0** (7f15b90 , xrpl-validator) Regenerated supported_amendments() from 3.2.0 features.macro (Supported::Yes, 46): drops the amendments 3.2.0 retired into baseline, adds the new supported 3.2.0 amendments (LendingProtocol/TokenEscrow/PermissionedDEX/SingleAssetVault/DynamicNFT/ MPTokensV1 + fixes), and excludes the 5 Supported::No placeholders (MPTokensV2/Batch/ PermissionDelegationV1_1/DynamicMPT/fixBatchInnerSigs) the binary can't yet apply. ...
- **fix(ff): port shim build to rippled 3.2.0 — ed25519/secp256k1 now conan pkgs** (7238d72 , xrpl-validator) 3.2.0 moved ed25519/secp256k1 from external/ source builds to conan packages (targets ed25519::ed25519 / secp256k1::secp256k1, per rippled cmake/XrplCore.cmake). CMakeLists: drop dead external/-path IMPORTED targets -> find_package + conan targets. build.rs: drop manual ed25519/secp256k1 link lines (collect_conan_libs resolves them).
- **fix(ff): migrate shim from namespace ripple to xrpl for rippled 3.2.0** (6ef2393 , xrpl-validator) 3.2.0 completed the ripple->xrpl namespace rename across libxrpl/xrpld (no compat alias). Migrate the hand-written shim files (CallbackReadView/MinimalApp/ MutationCollector + xrpl_shim.cpp): namespace decls + all ripple:: qualifiers -> xrpl.
- **fix(ff): adapt CallbackReadView to rippled 3.2.0 ReadView interface** (c166a21 , xrpl-validator) info()->header() (LedgerInfo->LedgerHeader); sles_type/txs_type renamed SlesType/ Txstype; balanceHook split into balanceHookIOU/MPT/SelfIssueMPT (non-pure) + ownerCountHook non-pure -> drop no-op overrides; digest() now pure -> throw-stub.
- **fix(ff): repath MinimalApp includes + digest type for 3.2.0 libxrpl/xrpld reorg** (99c45d6 , xrpl-validator) 3.2.0 moved headers from xrpld/ into libxrpl: HashRouter.h xrpld/app/misc->xrpl/core; LoadFeeTrack.h xrpld/app/misc->xrpl/server; Ledger.h xrpld/app/ledger->xrpl/ledger. CallbackReadView::digest now returns std::optional (digest_type alias not member-accessible). Application/Config/OrderBookDB stayed in xrpld.
- **fix(ff): rewrite MinimalApp for 3.2.0's 16-virtual Application + shim fixes** (7e13344 , xrpl-validator) 3.2.0 slimmed Application to 16 pure virtuals (lifecycle + config/nodeIdentity/etc; heavy service accessors gone). Rewrote MinimalApp to implement exactly those 16 (config() real w/ networkId; rest stub-throw), dropping ~35 obsolete overrides + the hashRouter/loadFeeTrack/orderBookDB/logs members — which also clears the io_service, PathRequests, OrderBookDB-incomplete, setup_HashRouter, beast::severities, and ...

- **fix(ffl): MinimalApp implements all 46 ServiceRegistry virtuals + xrpl_shim 3.2.0** (6b77e3c , xrpl-validator) 3.2.0 moved the service accessors into a ServiceRegistry base (46 pure virtuals). MinimalApp now implements all 62 (16 Application + 46 ServiceRegistry): config() real (networkId); isStopping/getApp/getJournal(null sink)/getTrapTxID kept safe so apply-path lifecycle/logging calls don't throw; the rest are throw-stubs (shadow window will reveal any apply actually needs — e.g. ...
- **fix(ffl): beast::Severity enum values are Fatal/Error (not kFatal/kError)** (1ecb3f5 , xrpl-validator)
- **feat(validator): API bind port is FFI_PORT-configurable (default 3777)** (92ca532 , xrpl-validator) Lets a shadow/test instance run beside the live validator on a different port (FFI_PORT=3787); production unchanged (default 3777).
- **fix(ffl): MinimalApp::getNetworkIDService real (NetworkIDServiceImpl) for 3.2.0** (15f602f , xrpl-validator) The shadow showed every FFI apply throwing tefEXCEPTION 'MinimalApp::getNetworkIDService — not implemented'. 3.2.0 preflight routes the tx NetworkID check through getNetworkIDService(); implement it like the real Application: make_unique(config.networkId).
- **fix(ffl): make getHashRouter/getFeeTrack/getOrderBookDB/getLogs real for 3.2.0** (db47945 , xrpl-validator) Port the <=3.1.x shim's real service impls to the 3.2.0 MinimalApp: HashRouter (setup_HashRouter + stopwatch), LoadFeeTrack (null journal), OrderBookDB(*this), and Logs(Fatal) that OrderBookDB needs. The apply()/preflight() chain reaches these for regular tx types; previously throw-stubbed -> every live-apply hit tefEXCEPTION (getHashRouter). Signing path is unaffected (independent of FFI).

Docs and operations

- **chore(3.2.0-prep): F8c shim version comments + port plan + release watch** (c50394e , xrpl-validator)
- **docs(amendments): read-only vote-board design spec (v1)** (8bb6a6f , xrpl-validator)

Appendix — commits

Time	Repo	Commit	Subject
08:09	xrpl-validator	c50394e	chore(3.2.0-prep): F8c shim version comments + port plan + release watch
09:41	xrpl-validator	8bb6a6f	docs(amendments): read-only vote-board design spec (v1)
21:28	xrpl-validator	7f15b90	feat(validator): regenerate amendment vote list for rippled 3.2.0
21:56	xrpl-validator	7238d72	fix(ffl): port shim build to rippled 3.2.0 — ed25519/secp256k1 now conan pkgs
22:02	xrpl-validator	6ef2393	fix(ffl): migrate shim from namespace ripple to xrpl for rippled 3.2.0
22:10	xrpl-validator	c166a21	fix(ffl): adapt CallbackReadView to rippled 3.2.0 ReadView interface
22:15	xrpl-validator	99c45d6	fix(ffl): repath MinimalApp includes + digest type for 3.2.0 libxrpl/xrpld reorg
22:26	xrpl-validator	7e13344	fix(ffl): rewrite MinimalApp for 3.2.0's 16-virtual Application + shim fixes
22:34	xrpl-validator	6b77e3c	fix(ffl): MinimalApp implements all 46 ServiceRegistry virtuals + xrpl_shim 3.2.0
22:36	xrpl-validator	1ecb3f5	fix(ffl): beast::Severity enum values are Fatal/Error (not kFatal/kError)
23:02	xrpl-validator	92ca532	feat(validator): API bind port is FFI_PORT-configurable (default 3777)
23:11	xrpl-validator	15f602f	fix(ffl): MinimalApp::getNetworkIDService real (NetworkIDServiceImpl) for 3.2.0
23:59	xrpl-validator	db47945	fix(ffl): make getHashRouter/getFeeTrack/getOrderBookDB/getLogs real for 3.2.0
