

XRPL Validator — Daily Engineering Report • 2026-07-22

Compiled retrospectively on 2026-09-23 from the git history. Scope: XRPL work only — the git history of [xrpl-validator](#) and the XRPL Rust SDK, the XRP Ledger itself (amendments) and XRPL research.

Summary

- **1 commit** (xrpl-validator 1)

Engineering changes

- **fix(xrpl-ledger): NFTokenCreateOffer token-existence preclaim + sandbox create-then-delete nets to nothing — 2 fresh-traffic finds** (0a4d4f5, xrpl-validator) Two shadow finds from the first hour of hourly scouting: NFTokenCreateOffer preclaim now walks the token owner's pages (sell → Account, buy → sfOwner) and returns tecNO_ENTRY when the token is absent, per rippled NFTokenCreateOffer::preclaim findToken. Was accepting stale buy offers for burned/moved tokens (#105757083 1B7B0C8A). Probe preloads the owner's NFT pages for NFTokenCreateOffer.

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: [iceland.halcyon-names.io](#)). They are exploration leads, not proposals.

- **AMM LP Tokens as Vault Loan Collateral** (lending) Add a tfAcceptAMMLPCollateral flag plus sfLPTokenIssuer/sfLPTokenCurrency SFields to VaultSet, letting a SingleAssetVault whitelist one AMM's LPToken
- **Flag-Day Parameter Votes for Fee Constants** (governance) Add a ParameterVote pseudo-transaction that validators cast each ledger, modeled directly on NegativeUNL's ledger-header voting pattern, tallied into
- **Policy-Gated Vaults for Client Segregation** (custody) Add sfWithdrawalLimit, sfApprovedDestinations (a bounded STVector256 of destination account hashes), and sfCoSigners/sfCoSignerQuorum SFields to the S
