

XRPL Validator — Daily Engineering Report • 2026-07-26

Compiled retrospectively on 2026-09-23 from the git history. Scope: XRPL work only — the git history of [xrpl-validator](#) and the XRPL Rust SDK, the XRP Ledger itself (amendments) and XRPL research.

Summary

- 3 commits (xrpl-validator 3)

Engineering changes

- **fix(nftoken): decode the base58 Issuer field on authorised-minter mints** (881e160, xrpl-validator)
NFTokenMint's decode_account_id was hex-only, but the probe does not hex-normalise the Issuer field (it is absent from ACCOUNT_FIELDS), so an authorised-minter mint's base58 Issuer silently failed to decode and fell back to tx.account -- the minter. One wrong account cascaded two ways: MintedNFTokens was credited to the minter instead of the issuer, and the NFTokenID embedded the minter, so the token's low-96 -- ...
- **fix(clawback): decode the base58 holder from Amount.issuer** (f6ed033, xrpl-validator)
Clawback resolves the token holder from the nested Amount.issuer field, but misc.rs::decode_account_id was hex-only. The probe hex-normalises only top-level ACCOUNT_FIELDS, never a nested amount object, so Amount.issuer arrives as a base58 r-address -- decoding it hex-only returned None and the transactor rejected a valid clawback as Malformed. A spurious reject is consensus-relevant: we would drop a tx mainnet ...

Docs and operations

- **docs: honest README + PROGRESS — accurate architecture + status** (34a549a, xrpl-validator)

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: [iceland.halcyon-names.io](#)). They are exploration leads, not proposals.

- **Netted Settlement Across Segregated Sub-Accounts** (custody) Add a new transaction ttSUBACCOUNT_NET carrying a bounded array (max 32) of sfNetLeg entries, each pairing two SubAccount keylets under the Segregated
- **Stealth Payment Pseudo-Accounts** (privacy) Add a StealthMeta ledger object (owner-reserved, keylet::stealthMeta(account)) published via a new SetStealthMeta transaction carrying sfViewPublicKey
- **Escrow-Backed Corporate Actions for MPTs** (rwa) Add a CorporateAction ledger object (ltCORPORATE_ACTION, owner-reserved, keylet::corpAction(issuanceID, sequence)) created by a new

Appendix — commits
