

XRPL Validator — Daily Engineering Report · 2026-09-20

Compiled retrospectively on 2026-09-23 from the git history. Scope: XRPL work only — the git history of [xrpl-validator](#) and the XRPL Rust SDK, the XRP Ledger itself (amendments) and XRPL research.

Summary

- 12 commits (xrpl-validator 12)
- Amendment **BatchV1_1** held majority (since 2026-09-15 14:06 UTC); activation due ~2026-09-29 14:06 UTC

Docs and operations

- Merge branch 't2-flow' (daeb3a8 , xrpl-validator)
- vectors: pin TicketCreate (28 tickets) and OfferCancel of a live offer — the two common mainnet types the gate had no byte-exact pin for (63e2a78 , xrpl-validator)
- vectors: pin UNLModify disable + re-enable (with the flag-ledger NegativeUNL rotation applied first) — the pseudo-transactions had no byte-exact pin (840c268 , xrpl-validator)
- vectors: pin EnableAmendment (fixCleanup3_3_0 activation, #106911489); pseudo drills move to pseudo_tx_vector.rs (9b3a153 , xrpl-validator)
- vectors: pin EnableAmendment tfGotMajority (#107003649) — the Majorities path of the pseudo-transaction (20bc9ec , xrpl-validator)
- Finding 345: CredentialAccept judges the subject's reserve for the object it takes over (tecINSUFFICIENT_RESERVE) (df80bb7 , xrpl-validator)
- Finding 346: a second CredentialAccept is tecDUPLICATE (lsfAccepted); harness: hydrate the DID object for DIDSet/DIDDelete (b3ccc4d , xrpl-validator)
- vectors: port-only suite — four campaign-6 payments (limit quality, partial+DeliverMin over paths) the port gets byte-exact and the model does not (64645e6 , xrpl-validator)
- Finding 347: AMMDelete is tecAMM_NOT_EMPTY while LP tokens are outstanding, terNO_AMM without a pool; the apply is deleteAMMAccount (df4b355 , xrpl-validator)
- vectors: two more port-only campaign-6 payments (partial over a fee issuer; default-path EUR → USD) (3a54c24 , xrpl-validator)
- vectors: seventh port-only campaign-6 payment (partial+DeliverMin, default paths, fee issuer) (fc54c49 , xrpl-validator)
- harness: the probe hydrates the AMM pre-state for AMMDelete too (finding 347's tec reads the pool object) (0aab032 , xrpl-validator)

Amendment watch

Read from the XRP Ledger: the Amendments object as of the last ledger of the day, and the day's EnableAmendment pseudo-transactions.

Amendment	Majority since	Activation due
BatchV1_1	2026-09-15 14:06 UTC	2026-09-29 14:06 UTC

Amendments enabled on mainnet: 94.

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: iceland.halcyon-names.io). They are exploration leads, not proposals.

- **Atomic Vault Flash-Swap** (lending) New transaction ttVAULT_FLASH_SWAP carries sfVaultID, sfAmount (asset borrowed from the vault's pooled balance), sfSendMax, and an STPathSet like Paym
- **State-Conditioned Escrow Finish** (hooks) Add an EscrowCreate flag tfStateCondition plus sfConditionKeylet (a target ledger object) and sfConditionPredicate (enum: Deleted, FieldGTE, FieldLTE)
- **Vault Manager Attestation Registry** (audit) Extend the in-flight XLS-98 Vault metadata standard with an optional sfAttestationID on VaultSet, referencing a new ltATTESTATION object (owner-reserv
