XRPL Validator — Daily Engineering Report · 2026-08-05

Period: 2026-08-05 00:00 to 24:00 US Eastern (2026-08-05 04:00 to 2026-08-06 04:00 UTC). Generated 2026-10-21 00:47 EDT by report generator v3.0. Sources: the XRP Ledger (ledger headers and amendments, read from a reference rippled node), the validator's signing log and receipt logs, the deployment pipeline's gate, soak and health records, the git history of xrpl-validator and the XRPL Rust SDK, and data.xrpl.org. Scope: XRPL work only.

Revised on 2026-10-21 in report format v3; the original is kept in this repository's history. Built only from records that exist for this day. Available: xrpl-validator merge records (they begin 2026-07-04). Not available: ledger headers (the reference node holds ledgers from 2026-10-04 22:52 UTC); signing records (they begin 2026-09-19); Step 1 receipt records (they begin 2026-08-29); Steps 2–5 receipt records (they begin 2026-10-09); deployment records (they begin 2026-09-11); amendment data; data.xrpl.org agreement scores (scored days begin 2026-04-04; some days have none).

Status

Not assessed — no signing records for this day.

Criteria. Normal: coverage outside planned maintenance at or above the 99.9% objective, every validation agreed with the network's validated ledger, and no engine receipt is open. Degraded: coverage below the objective, or an open engine receipt. Impaired: any validation that disagreed with the network, or coverage below 90%.

Executive summary

- **Validator:** no signing records for this day (they begin 2026-09-19).
- **Native engine:** no receipt records for this day (they begin 2026-08-29).
- **Changes:** 0 deployments, 0 commits merged into main.

Service levels

No signing records for this day (they begin 2026-09-19).

Native engine conformance

No receipt records for this day (Step 1 records begin 2026-08-29, Steps 2–5 records 2026-10-09).

Live counters are kept only for the current run; none exist for a past day.

Receipt register

No receipt records for this day (Step 1 records begin 2026-08-29).

Incidents

Not assessed: no signing records for this day.

Change log

Deployments

No deployment records before 2026-09-11.

Merged into main

No merges into main.

Findings fixed

No engine findings merged into main this day.

Other engineering changes

- **fix(ledger): a single-path leg is priced by its pool's SPOT quality** (`01c41a0`, xrpl-validator) #105940336 CA2C624ED031: 6 mutations against 10. Now 199/199 — the ledger is fully clean. batch2 24/26, 2 divergences left.
- **fix(ledger): price an out-limited fill through the offer's encoded quality** (`9426fbe`, xrpl-validator) #105924683 E7399DA36A79: 9 mutations against 7. Now 73/73 — the ledger is fully clean. batch2 25/26, 1 divergence left.
- **fix(ffi): route the registry journal to the capturing sink so Payments trace** (`0144f50`, xrpl-validator) An XRPL_FFI_TRACE of a Payment came back with four content lines and no flow logs at all, while an OfferCreate on the same binary traced in full. The asymmetry is a null sink, not a missing JLOG.
- **feat(ledger): DX_PAY round line before the loop's breaks** (`f0f311e`, xrpl-validator) Diagnostic only, behind the existing `DX_PAY` env var. The round print sat AFTER both `break`s, so the round that ended the loop never printed and it looked like the multi-strand loop ran once. It runs twice; the print was lying by omission. Moved ahead of the breaks and given the round index, sin/sout and the multi flag.
- **fix(ledger): per-fib-slice AMM granularity in the multi-strand payment loop** (`64dc440`, xrpl-validator) #105912291 2AE3693EF556: 10 mutations against 9. Now 213/213 — and batch2 is **26/26, ZERO divergences**, down from 5 at the start of this run.
- **fix(probe): load the tail's predecessor page, and compare pointers by VALUE** (`c89601c`, xrpl-validator) #105886344 E430B7E92B22: 9 mutations against 7. Now 40/40, and newfinds goes 61/63. Both defects are in the PROBE, not the engine — neither side crosses anything here (`FLOWDBG strand 0 strandQ 5.480509506737132 limitQuality 4.007486192099164 admitted false`, Total flow 0/0; our DX_PLACE says `crossed=0`). `parity_probe` stayed CLEAN throughout, which is the documented tell for a harness bug: libxrpl reads through a …

- **fix(ledger): one flow-wide AMM fib counter in cross_bridged, not one per leg** (`178e853`, xrpl-validator) #105876680 26AF14542086: 10 mutations against 5, all five extra. Now 32/32, and newfinds goes 62/63 — ONE divergence left on the whole board.
- **fix(ledger): price an IN-limited fill through the encoded quality too** (`7ff7a13`, xrpl-validator) #105843839 02A79DBAD8BD: 11 mutations against 13. Now 125/125 — and every leg of the gate is FULLY CLEAN, 0 divergences anywhere.

Independence program

No independence record for UTC day 2026-08-05; records begin 2026-10-20.

Network

No ledger records for this day: the reference node holds ledgers from 2026-10-04 22:52 UTC (#107,436,647).

Amendment watch

No amendment records for this day.

Open items

None.

Corrections to earlier reports

None.

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: iceland.halcyon-names.io). They are exploration leads, not proposals.

- **VRF-Verified Escrow Lottery Draws** (oracles) Add a `VRFProvider` ledger object (owner-reserved, keylet::vrfProvider(account)) created by a new `VRFProviderSet{sfVRFPublicKey}` transaction registe
- **Atomic Confidential MPT DvP Settlement** (settlement) Add a `ConfidentialDvPOffer` ledger object (owner-reserved, keylet::confidentialDvP(account, seq)) created via `DvPOfferCreate{sfCommittedMPT, sfCount
- **Issuer-Wide Instant Deep-Freeze Block** (compliance) Add an `IssuerBlock` ledger object (owner-reserved by the issuer, keylet::issuerBlock(issuer, holder)) toggled by a new `IssuerBlockSet{sfHolder, tfSe

Appendix — commits

Committed	Merged into main	Repo	Commit	Subject
08-05 04:23	—	xrpl-validator	`01c41a0`	fix(ledger): a single-path leg is priced by its pool's SPOT quality
08-05 15:56	—	xrpl-validator	`9426fbe`	fix(ledger): price an out-limited fill through the offer's encoded quality
08-05 18:03	—	xrpl-validator	`0144f50`	fix(ffi): route the registry journal to the capturing sink so Payments trace
08-05 18:47	—	xrpl-validator	`f0f311e`	feat(ledger): DX_PAY round line before the loop's breaks
08-05 21:10	—	xrpl-validator	`64dc440`	fix(ledger): per-fib-slice AMM granularity in the multi-strand payment loop
08-06 01:04	—	xrpl-validator	`c89601c`	fix(probe): load the tail's predecessor page, and compare pointers by VALUE
08-06 02:12	—	xrpl-validator	`178e853`	fix(ledger): one flow-wide AMM fib counter in cross_bridged, not one per leg
08-06 03:59	—	xrpl-validator	`7ff7a13`	fix(ledger): price an IN-limited fill through the encoded quality too

Times in UTC. A commit appears on the day it was committed to main or merged into it.
