XRPL Validator — Daily Engineering Report · 2026-08-08

Period: 2026-08-08 00:00 to 24:00 US Eastern (2026-08-08 04:00 to 2026-08-09 04:00 UTC). Generated 2026-10-21 00:47 EDT by report generator v3.0. Sources: the XRP Ledger (ledger headers and amendments, read from a reference rippled node), the validator's signing log and receipt logs, the deployment pipeline's gate, soak and health records, the git history of xrpl-validator and the XRPL Rust SDK, and data.xrpl.org. Scope: XRPL work only.

Revised on 2026-10-21 in report format v3; the original is kept in this repository's history. Built only from records that exist for this day. Available: xrpl-validator merge records (they begin 2026-07-04). Not available: ledger headers (the reference node holds ledgers from 2026-10-04 22:52 UTC); signing records (they begin 2026-09-19); Step 1 receipt records (they begin 2026-08-29); Steps 2–5 receipt records (they begin 2026-10-09); deployment records (they begin 2026-09-11); amendment data; data.xrpl.org agreement scores (scored days begin 2026-04-04; some days have none).

Status

Not assessed — no signing records for this day.

Criteria. Normal: coverage outside planned maintenance at or above the 99.9% objective, every validation agreed with the network's validated ledger, and no engine receipt is open. Degraded: coverage below the objective, or an open engine receipt. Impaired: any validation that disagreed with the network, or coverage below 90%.

Executive summary

- **Validator:** no signing records for this day (they begin 2026-09-19).
- **Native engine:** no receipt records for this day (they begin 2026-08-29).
- **Changes:** 0 deployments, 0 commits merged into main.

Service levels

No signing records for this day (they begin 2026-09-19).

Native engine conformance

No receipt records for this day (Step 1 records begin 2026-08-29, Steps 2–5 records 2026-10-09).

Live counters are kept only for the current run; none exist for a past day.

Receipt register

No receipt records for this day (Step 1 records begin 2026-08-29).

Incidents

Not assessed: no signing records for this day.

Change log

Deployments

No deployment records before 2026-09-11.

Merged into main

No merges into main.

Findings fixed

No engine findings merged into main this day.

Other engineering changes

- **fix(xrpl-ledger): single-path AMM takes maxOffer, clamped through the pool BOTH ways** (`3180e04`, xrpl-validator) Closes #106137477 `CD634127CD8B` (86/87 -> 87/87) and wires in the `max_offer` built in a171405. The clamp that a171405 named as "the missing half" turned out to be TWO-directional, which is what defeated that attempt.
- **fix(xrpl-ledger): limitOut sizes a pass TO the limit — #106134431 closed 122/122** (`3033135`, xrpl-validator) Completes the AMM bridge slice-sizing family. Every divergence from the 2026-08-07 fresh batch now matches mainnet.
- **fix(xrpl-ledger): destination checks across every transactor that has them** (`b569fa9`, xrpl-validator) 5626357 fixed destination-check ORDERING in payment.rs and I called the class closed. It was not: the very next fresh batch found the same class wrong in a second Payment branch AND in a transactor I had not looked at. So this time I grepped every transactor that emits the code -- rippled has tecDST_TAG_NEEDED in SEVEN, we had it in TWO.
- **fix(xrpl-ledger): the reverse pass must size for the pass the forward one runs** (`89bed1e`, xrpl-validator) #106143011 5D327F343A54 -- Payment, ours tecPATH_PARTIAL vs net tesSUCCESS, 1 mutation against 33. Circular tfPartialPayment, SendMax 100 SPY into 18.00944028251864 RLUSD via SPY->XRP->RLUSD, DeliverMin 17.91939308110604.
- **fix(xrpl-ledger): tfNoRippleDirect forbids the strand we fall back to** (`7d785ec`, xrpl-validator) #106146562 C56D61917E4B -- Payment, ours tesSUCCESS with 4 mutations vs net tecPATH_DRY with 1. Three EXTRA nodes, none missing.
- **fix(xrpl-ledger): size the reverse-pass grant to the requirement it measures** (`125be81`, xrpl-validator) #106148286 4EFC975484E1 -- Payment, ours tecPATH_PARTIAL vs net tesSUCCESS, 1 mutation against 9. Circular tfPartialPayment|tfNoRippleDirect, SendMax 0.02117670765212899 mXRP for 2.302493172774841

CORE over a FOUR-leg chain of pools, mXRP -> BitX -> BTC -> CORE. One strand, so 89bed1e is inert here: same symptom as #106143011, different regime.

- **fix(xrpl-ledger): a bridge leg-B maker cannot deliver more than it holds** (`5dc7cb7` , xrpl-validator) #106146362 75511674AD58 -- tfSell OfferCreate, 1000 XAH for 1 RLUSD, autobridged XAH->XRP->RLUSD. Both engines tesSUCCESS; ours 11 mutations against mainnet's 16, 5 missing, none extra.
- **feat(xrpl-node): DX_VALCHECK — compare the VALUES we wrote, not just the keys** (`9bc95c8` , xrpl-validator) The differential probe's verdict is a mutation-set comparison, and a mutation set is KEYS. Every value a transaction writes is invisible to it.
- **fix(xrpl-ledger): a rested residual keeps its ORIGINAL quality in its AMOUNTS** (`850da82` , xrpl-validator) The book page for a partially crossed offer has always been built from the offer as REQUESTED (`tp0` / `tg0`) -- rippled keeps a partial fill at its original price. The AMOUNTS written into that offer did not follow: they were `TakerGets - consumed` , i.e. reduced by the currency actually handed over.
- **fix(xrpl-ledger): NFTokenCreateOffer never charged for the object it creates** (`a56ccbd` , xrpl-validator) #106154459 A55AD53EEFA2 -- ours tesSUCCESS with 5 mutations vs mainnet tecINSUFFICIENT_RESERVE with 1. All five EXTRA: the NFTokenOffer plus both directory pages.
- **feat(xrpl-ledger): one strand per named path, and stop gating hops with the payment's limit** (`868cf89` , xrpl-validator) #106156904 341030105165 -- ours tecPATH_DRY with 1 mutation vs mainnet tesSUCCESS with 7. Circular tfPartialPayment|tfLimitQuality, SendMax 7.203545999999999 USDT for 0.095 SOL, and `Paths` carries SIX paths.

Independence program

No independence record for UTC day 2026-08-08; records begin 2026-10-20.

Network

No ledger records for this day: the reference node holds ledgers from 2026-10-04 22:52 UTC (#107,436,647).

Amendment watch

No amendment records for this day.

Open items

None.

Corrections to earlier reports

None.

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: iceland.halcyon-names.io). They are exploration leads, not proposals.

- **Threshold Crypto-Conditions for Checks** (payments) Extend CheckCreate with an optional sfCondition SField using CryptoConditionsSuite's expanded condition types (THRESHOLD-SHA-256, PREFIX-SHA-256, PREI
- **Credential-Gated Guardian Account Recovery** (accounts) Add a RecoverList ledger object (ltRECOVER_LIST, owner-reserved, keylet::recover(account)) created via RecoverListSet, holding sfGuardians (AccountID
- **Reserve-Gated Wrapped-Asset Minting** (audit) Add lsfRequireReserveProof, sfReserveAttestationID (a keylet reference to an on-ledger reserve-attestation object), sfMinReserveBps, and sfMaxReserveA

Appendix — commits

Committed	Merged into main	Repo	Commit	Subject
08-08 04:14	—	xrpl-validator	`3180e04`	fix(xrpl-ledger): single-path AMM takes maxOffer, clamped through the pool BOTH ways
08-08 05:13	—	xrpl-validator	`3033135`	fix(xrpl-ledger): limitOut sizes a pass TO the limit — #106134431 closed 122/122
08-08 07:59	—	xrpl-validator	`b569fa9`	fix(xrpl-ledger): destination checks across every transactor that has them
08-08 10:04	—	xrpl-validator	`89bed1e`	fix(xrpl-ledger): the reverse pass must size for the pass the forward one runs
08-08 10:49	—	xrpl-validator	`7d785ec`	fix(xrpl-ledger): tfNoRippleDirect forbids the strand we fall back to
08-08 11:36	—	xrpl-validator	`125be81`	fix(xrpl-ledger): size the reverse-pass grant to the requirement it measures
08-08 15:34	—	xrpl-validator	`5dc7cb7`	fix(xrpl-ledger): a bridge leg-B maker cannot deliver more than it holds
08-08 18:03	—	xrpl-validator	`9bc95c8`	feat(xrpl-node): DX_VALCHECK — compare the VALUES we wrote, not just the keys
08-08 22:17	—	xrpl-validator	`850da82`	fix(xrpl-ledger): a rested residual keeps its ORIGINAL quality in its AMOUNTS
08-08 23:30	—	xrpl-validator	`a56ccbd`	fix(xrpl-ledger): NFTokenCreateOffer never charged for the object it creates
08-09 01:36	—	xrpl-validator	`868cf89`	feat(xrpl-ledger): one strand per named path, and stop gating hops with the payment's limit

Times in UTC. A commit appears on the day it was committed to main or merged into it.
