XRPL Validator — Daily Engineering Report · 2026-08-15

Period: 2026-08-15 00:00 to 24:00 US Eastern (2026-08-15 04:00 to 2026-08-16 04:00 UTC). Generated 2026-10-21 00:47 EDT by report generator v3.0. Sources: the XRP Ledger (ledger headers and amendments, read from a reference rippled node), the validator's signing log and receipt logs, the deployment pipeline's gate, soak and health records, the git history of xrpl-validator and the XRPL Rust SDK, and data.xrpl.org. Scope: XRPL work only.

Revised on 2026-10-21 in report format v3; the original is kept in this repository's history. Built only from records that exist for this day. Available: xrpl-validator merge records (they begin 2026-07-04). Not available: ledger headers (the reference node holds ledgers from 2026-10-04 22:52 UTC); signing records (they begin 2026-09-19); Step 1 receipt records (they begin 2026-08-29); Steps 2–5 receipt records (they begin 2026-10-09); deployment records (they begin 2026-09-11); amendment data; data.xrpl.org agreement scores (scored days begin 2026-04-04; some days have none).

Status

Not assessed — no signing records for this day.

Criteria. Normal: coverage outside planned maintenance at or above the 99.9% objective, every validation agreed with the network's validated ledger, and no engine receipt is open. Degraded: coverage below the objective, or an open engine receipt. Impaired: any validation that disagreed with the network, or coverage below 90%.

Executive summary

- **Validator:** no signing records for this day (they begin 2026-09-19).
- **Native engine:** no receipt records for this day (they begin 2026-08-29).
- **Changes:** 0 deployments, 0 commits merged into main.

Service levels

No signing records for this day (they begin 2026-09-19).

Native engine conformance

No receipt records for this day (Step 1 records begin 2026-08-29, Steps 2–5 records 2026-10-09).

Live counters are kept only for the current run; none exist for a past day.

Receipt register

No receipt records for this day (Step 1 records begin 2026-08-29).

Incidents

Not assessed: no signing records for this day.

Change log

Deployments

No deployment records before 2026-09-11.

Merged into main

No merges into main.

Findings fixed

No engine findings merged into main this day.

Other engineering changes

- **fix(xrpl-ledger): the AMM anchors only on a tip the taker could actually trade** (`1a96950`, xrpl-validator) `tryAMM` is handed `offers.tip().quality()`, and a tip beyond the taker's limit is not a tip the offer stream ever reaches — rippled then calls it with NO clob quality, which is `maxOffer`, and `limitOut` trims that to the limit instead. Our direct-walk AMM turn ran BEFORE the `q > threshold` break and anchored the slice to a level the taker had already rejected, sizing the fill off a price that was never available.
- **fix(harness): hydrate the NFT offer CREATOR's pages, not just the token's owner** (`fbb4f96`, xrpl-validator) `load_nft_pages_for_tx` took `Owner` OR `Account` for NFTokenCreateOffer. On a BUY offer `Owner` is the token's current holder — the seller — so the creator was skipped, and the creator is precisely the party who will RECEIVE the token.
- **fix(xrpl-ledger): ceilOut CLAMPS the input to the offer's own, and either side at zero consumes it** (`853e75a`, xrpl-validator) Two symptoms, one missing rule. `ceilOutImpl` ends with a step that is explicit in rippled's source, not a rounding artefact (Quality.cpp): Amounts result(MulRoundFunc(limit, quality.rate(), amount.in.asset(), roundUp), limit); // Clamp in if (result.in > amount.in) result.in = amount.in;
- **fix(xrpl-ledger): AccountDelete removes the owner DIRECTORY, not just the account** (`b301e07`, xrpl-validator) rippled's teardown erases the directory explicitly, before the account (AccountDelete.cpp): Keylet const ownerDirKeylet{keylet::ownerDir(accountID_)}; … if (view().exists(ownerDirKeylet) && !view().emptyDirDelete(ownerDirKeylet)) view().update(dst); view().erase(src);
- **feat(xrpl-ledger): DepositAuth — a payment needs the destination's permission** (`51300d1`, xrpl-validator) We had NO DepositAuth support at all: before this the only occurrence of the term in the crate was a comment about which flags an AMM account carries. So an account that had explicitly closed itself to unsolicited payments received them from us anyway.
- **fix(xrpl-ledger): AMMWithdraw splits "no LP tokens" from "too few" — and the pool's own lines get hydrated** (`e982148`, xrpl-validator) `AMMWithdraw::preclaim` (AMMWithdraw.cpp:272-288) distinguishes two

failures we collapsed into one: if (lpTokens <= beast::kZero) return tecAMM_BALANCE; // holding NONE if (*lpTokensWithdraw > lpTokens) return tecAMM_INVALID_TOKENS; // holding TOO FEW

- **fix(xrpl-ledger): a tfSell FillOrKill completes on its FUNDED input, not on TakerGets** (`91cdc47`, xrpl-validator) rippled calls `flow(..., partialPayment = !tfFillOrKill, ...)`, so a FillOrKill offer either completes or moves nothing — and completion is the OUT side for a BUY (TakerPays delivered in full) but the IN side for a SELL. A sell bounded by the taker's own funding is complete when those funds are spent: `flowCross` clears BOTH sides of the remainder ("If offer crossing exhausted the account's funds don't create the …

Independence program

No independence record for UTC day 2026-08-15; records begin 2026-10-20.

Network

No ledger records for this day: the reference node holds ledgers from 2026-10-04 22:52 UTC (#107,436,647).

Amendment watch

No amendment records for this day.

Open items

None.

Corrections to earlier reports

None.

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: iceland.halcyon-names.io). They are exploration leads, not proposals.

- **MPT Transfer Sink + Tournament Escrow Pools** (gaming) Add sfTransferSinkRate (basis points, immutable, set only at MPTokenIssuanceCreate) to MPTokenIssuance: every transfer of that MPT diverts sinkRate/10
- **Policy-Gated Signer Lists for MPC Custody** (custody) Add lsfMPCDerived, a flag marking an XLS-49 multi-signer-list entry as backed by an off-ledger MPC/threshold key ceremony, plus two SFields on the Sig
- **Continuous Flow-Rate Payment Channels** (payments) Add sfFlowRate (units per ledger-close-second) and sfLastAccrualTime to the PayChannel ledger object, plus a tfFlowChannel flag on PaymentChannelCreat

Appendix — commits

Committed	Merged into main	Repo	Commit	Subject
08-15 04:26	—	xrpl-validator	`1a96950`	fix(xrpl-ledger): the AMM anchors only on a tip the taker could actually trade
08-15 13:53	—	xrpl-validator	`fbb4f96`	fix(harness): hydrate the NFT offer CREATOR's pages, not just the token's owner
08-15 14:55	—	xrpl-validator	`853e75a`	fix(xrpl-ledger): ceilOut CLAMPS the input to the offer's own, and either side at zero consumes it
08-15 15:53	—	xrpl-validator	`b301e07`	fix(xrpl-ledger): AccountDelete removes the owner DIRECTORY, not just the account
08-15 20:41	—	xrpl-validator	`51300d1`	feat(xrpl-ledger): DepositAuth — a payment needs the destination's permission
08-16 00:04	—	xrpl-validator	`e982148`	fix(xrpl-ledger): AMMWithdraw splits "no LP tokens" from "too few" — and the pool's own lines get hydrated
08-16 03:12	—	xrpl-validator	`91cdc47`	fix(xrpl-ledger): a tfSell FillOrKill completes on its FUNDED input, not on TakerGets

Times in UTC. A commit appears on the day it was committed to main or merged into it.
