XRPL Validator — Daily Engineering Report · 2026-08-18

Period: 2026-08-18 00:00 to 24:00 US Eastern (2026-08-18 04:00 to 2026-08-19 04:00 UTC). Generated 2026-10-21 00:47 EDT by report generator v3.0. Sources: the XRP Ledger (ledger headers and amendments, read from a reference rippled node), the validator's signing log and receipt logs, the deployment pipeline's gate, soak and health records, the git history of xrpl-validator and the XRPL Rust SDK, and data.xrpl.org. Scope: XRPL work only.

Revised on 2026-10-21 in report format v3; the original is kept in this repository's history. Built only from records that exist for this day. Available: xrpl-validator merge records (they begin 2026-07-04). Not available: ledger headers (the reference node holds ledgers from 2026-10-04 22:52 UTC); signing records (they begin 2026-09-19); Step 1 receipt records (they begin 2026-08-29); Steps 2–5 receipt records (they begin 2026-10-09); deployment records (they begin 2026-09-11); amendment data; data.xrpl.org agreement scores (scored days begin 2026-04-04; some days have none).

Status

Not assessed — no signing records for this day.

Criteria. Normal: coverage outside planned maintenance at or above the 99.9% objective, every validation agreed with the network's validated ledger, and no engine receipt is open. Degraded: coverage below the objective, or an open engine receipt. Impaired: any validation that disagreed with the network, or coverage below 90%.

Executive summary

- **Validator:** no signing records for this day (they begin 2026-09-19).
- **Native engine:** no receipt records for this day (they begin 2026-08-29).
- **Changes:** 0 deployments, 0 commits merged into main.

Service levels

No signing records for this day (they begin 2026-09-19).

Native engine conformance

No receipt records for this day (Step 1 records begin 2026-08-29, Steps 2–5 records 2026-10-09).

Live counters are kept only for the current run; none exist for a past day.

Receipt register

No receipt records for this day (Step 1 records begin 2026-08-29).

Incidents

Not assessed: no signing records for this day.

Change log

Deployments

No deployment records before 2026-09-11.

Merged into main

No merges into main.

Findings fixed

No engine findings merged into main this day.

Other engineering changes

- **fix(xrpl-ledger): a brokered accept must check BOTH offers' Destination** (`140d982`, xrpl-validator) In brokered mode rippled tests each offer's `Destination` against the SUBMITTER, in preclaim, before the broker-fee arithmetic: if (auto const dest = bo->at(~sfDestination); dest && *dest != ctx.tx[sfAccount]) return tecNO_PERMISSION; // and the same for so (NFTokenAcceptOffer.cpp:115-126)
- **fix(xrpl-ledger): PaymentChannelCreate refuses DisallowIncomingPayChan and pseudo-accounts** (`74a4d42`, xrpl-validator) Two checks rippled makes in `PaymentChannelCreate::preclaim` and we did not (PaymentChannelCreate.cpp:92-113), in its order: tecNO_DST -> lsfDisallowIncomingPayChan -> lsfRequireDestTag -> isPseudoAccount
- **fix(xrpl-ledger): NFTokenModify checks mutability and the issuer's authorised minter** (`39df833`, xrpl-validator) `NFTokenModify::preclaim`, after the existence test: if ((getFlags(id) & kFlagMutable) == 0) -> tecNO_PERMISSION if (issuer != account) { minter = issuer's sfNFTokenMinter; if (minter != account) -> tecNO_PERMISSION }
- **fix(xrpl-ledger): cashing a check releases the check's own reserve** (`92d8222`, xrpl-validator) rippled states it twice. Preclaim: // "src will have one reserve's worth of additional XRP once the check is // cashed, since the check's reserve will no longer be required" if (value.native()) availableFunds += XRPAmount{ctx.view.fees().increment}; (CheckCash.cpp:175-181)
- **fix(xrpl-ledger): a credential is unlinked from BOTH directories, and the reserve follows acceptance** (`3e02ee6`, xrpl-validator) `deleteSLE` (CredentialHelpers.cpp:74-124): delSLE(issuer, sfIssuerNode, !accepted || (subject == issuer)); if (subject != issuer) delSLE(subject, sfSubjectNode, accepted); view.erase(sleCredential);
- **fix(xrpl-ledger): NoRipple on the destination's line blocks the step out of a book** (`db5e428`, xrpl-validator) A `DirectStepI` that immediately follows a BOOK step is refused when the SOURCE side of its trust line carries NoRipple (DirectStep.cpp:440-445): if (ctx.prevStep->bookStepBook()) if (sleLine->isFlag((src_ > dst_) ? lsfHighNoRipple : lsfLowNoRipple)) return terNO_RIPPLE;

- **fix: AMM zero-side refusal, NFTokenCancelOffer permissions, default-path book** (`12ddc7c`, xrpl-validator) Three rules, gated together on a stable binary.
- **fix(xrpl-ledger): a mint that carries Amount inherits the OFFER's rules too** (`4ae3e03`, xrpl-validator) ★ A TRANSACTION THAT IS TWO OPERATIONS INHERITS BOTH SETS OF RULES. `NFTokenMint::preclaim` hands off to `nft::tokenOfferCreatePreclaim` when the transaction carries `Amount` — the mint also creates a sell offer — and that helper refuses a destination which has switched incoming NFT offers off: if (sleDst->isFlag(lsfDisallowIncomingNFTokenOffer)) return tecNO_PERMISSION; (NFTokenHelpers.cpp:885-892)
- **fix(xrpl-ledger): NFT accept judges the buyer's reserve when the transfer creates a page** (`2056087`, xrpl-validator) fixNFTokenReserve (NFTokenAcceptOffer.cpp:378-399, transferNFToken): when insertToken has to CREATE a page for the buyer, rippled refuses with tecINSUFFICIENT_RESERVE unless the buyer's balance AS IT STANDS — post-fee, post-price, deliberately NOT the pre-fee form the Mint/CreateOffer gates use — covers accountReserve(ownerCountAfter). Ported into transfer_token so the direct and brokered arms inherit it from the …
- **fix(xrpl-ledger): AMMDeposit re-judges each ACTUAL amount before sending it** (`c91e670`, xrpl-validator) rippled's funds test runs TWICE, and we ran neither half fully. Preclaim's balance lambda (AMMDeposit.cpp:230-252) judges the STATED amounts on the pre-fee balance — we had its XRP arm but skipped IOUs entirely; the IOU arm (accountFunds under IgnoreFreeze, issuer never short, no INSUF_RESERVE_LINE split) is now ported. deposit()'s checkBalance (AMMDeposit.cpp:514-538) then re-judges each DERIVED actual right before …
- **fix(xrpl-ledger): AMMVote refuses a voter who is not an LP** (`50d937e`, xrpl-validator) AMMVote::preclaim (AMMVote.cpp:59-77), in rippled's order: an emptied pool (LPTokenBalance zero) is tecAMM_EMPTY — new TxResult::AmmEmpty — then a voter holding NO LP tokens is tecAMM_INVALID_TOKENS, "AMM Vote: account is not LP." Judged by ammLPHolds, where a missing line holds nothing. Our preclaim checked only that the voter's account exists, so the vote landed as a fee-only tesSUCCESS (the VoteSlots write needs …
- **fix(xrpl-ledger): OracleSet time rules — tecINVALID_UPDATE_TIME** (`d32160a`, xrpl-validator) OracleSet::preclaim (OracleSet.cpp:68-81, :128-130), all three sites in rippled's order, new TxResult::InvalidUpdateTime: 1. LastUpdateTime below the ripple epoch offset (946684800); 2. outside closeTime +/- kMaxLastUpdateTimeDelta (300s) — the harness header's close_time is the parent's close, "the last closed ledger"; rippled bails tecINTERNAL when closeTime < 300, unreachable on a real ledger, so a degenerate …
- **fix(xrpl-ledger): an escrow whose deadline already passed is refused — and the token-escrow funds family** (`d86a69d`, xrpl-validator) Two coupled rules, either alone leaves the cluster divergent: 1. doApply's FIRST act (EscrowCreate.cpp:422-428): a CancelAfter or FinishAfter at-or-before the parent close time is tecNO_PERMISSION — after() is strictly `>` (View.cpp:559-562) and the harness header's close_time IS the parent's close. Outranks the XRP funding test and the tag test, both later in doApply. The 14-specimen burst (#106261496/582/583, …
- **fix(xrpl-ledger): mint reserve gate must see the page insert too** (`d57f139`, xrpl-validator) rippled snapshots ownerCountBefore at NFTokenMint::doApply ENTRY (NFTokenMint.cpp:281-282) and the tail gate (:331-341) covers everything after it — its own comment: the reserve "is only managed when a new NFT page or sell offer is added". Ours snapshotted AFTER page_insert, so only the mint-offer arm was ever judged and a page-creating mint with no Amount slipped through unjudged.

Independence program

No independence record for UTC day 2026-08-18; records begin 2026-10-20.

Network

No ledger records for this day: the reference node holds ledgers from 2026-10-04 22:52 UTC (#107,436,647).

Amendment watch

No amendment records for this day.

Open items

None.

Corrections to earlier reports

None.

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: iceland.halcyon-names.io). They are exploration leads, not proposals.

- **Atomic Flash Loans via Batch and Vault** (lending) Add a tfFlashLoan flag to VaultWithdraw permitting collateral-free withdrawal from a SingleAssetVault (ltVAULT) SLE, valid only when the withdrawal is
- **Bounded Sweep of Deletable Dust Accounts** (fees) Extend g27's ttOBJECT_SWEEP transaction so its bounded sfSweepIDs vector (max 16 entries) may include AccountRoot keylets in addition to trust-line/ob
- **Oracle-Triggered TokenEscrow Stop Orders** (dex) Add three SFields to EscrowCreate when creating a TokenEscrow object — sfTriggerOracle (a PriceOracle keylet), sfTriggerPrice (STAmount threshold), an

Appendix — commits

Committed	Merged into main	Repo	Commit	Subject
08-18 04:04	—	xrpl-validator	`140d982`	fix(xrpl-ledger): a brokered accept must check BOTH offers' Destination
08-18 12:18	—	xrpl-validator	`74a4d42`	fix(xrpl-ledger): PaymentChannelCreate refuses DisallowIncomingPayChan and pseudo-accounts

Committed	Merged into main	Repo	Commit	Subject
08-18 16:08	—	xrpl-validator	`39df833`	fix(xrpl-ledger): NFTokenModify checks mutability and the issuer's authorised minter
08-18 16:32	—	xrpl-validator	`92d8222`	fix(xrpl-ledger): cashing a check releases the check's own reserve
