XRPL Validator — Daily Engineering Report · 2026-09-11

Period: 2026-09-11 00:00 to 24:00 US Eastern (2026-09-11 04:00 to 2026-09-12 04:00 UTC); ledgers #106,904,496 to #106,926,931. Every count from the ledger and the validator's logs stops at #106,926,931. Generated 2026-10-21 00:47 EDT by report generator v3.0. Sources: the XRP Ledger (ledger headers and amendments, read from a reference rippled node), the validator's signing log and receipt logs, the deployment pipeline's gate, soak and health records, the git history of xrpl-validator and the XRPL Rust SDK, and data.xrpl.org. Scope: XRPL work only.

Revised on 2026-10-21 in report format v3; the original is kept in this repository's history. Built only from records that exist for this day. Available: the day's first and last ledger, from a public full-history server; Step 1 receipt records (they begin 2026-08-29); deployment records (they begin 2026-09-11); xrpl-validator merge records (they begin 2026-07-04); amendment data (carried from the original report). Not available: ledger headers (the reference node holds ledgers from 2026-10-04 22:52 UTC); signing records (they begin 2026-09-19); Steps 2–5 receipt records (they begin 2026-10-09); data.xrpl.org agreement scores (scored days begin 2026-04-04; some days have none).

Status

Not assessed — no signing records for this day.

Criteria. Normal: coverage outside planned maintenance at or above the 99.9% objective, every validation agreed with the network's validated ledger, and no engine receipt is open. Degraded: coverage below the objective, or an open engine receipt. Impaired: any validation that disagreed with the network, or coverage below 90%.

Executive summary

- **Validator:** no signing records for this day (they begin 2026-09-19).
- **Native engine:** 185 engine receipts recorded (18 fixed, 0 explained, 167 without a recorded fix).
- **Changes:** 2 deployments (cycles 121, 122), 14 commits merged into main, 13 engine findings fixed (F251–F265).

Service levels

No signing records for this day (they begin 2026-09-19).

Native engine conformance

Ledgers with a receipt in the period (#106,904,496–#106,926,931), by step:

Step	Ledgers with a receipt
Step 1 · native engine	185
Step 2 · records	0
Step 3 · order	0

Step	Ledgers with a receipt
Step 4 · peer data	0
Step 4 · validations	0
Step 5 · own hash	0
Writer	0

Live counters are kept only for the current run; none exist for a past day.

Receipt register

ID	Time	Ledger(s)	Step	Description	Disposition
R-01	—	#106,905,925	Step 1 · native engine	1 transaction result(s) differed from rippled's	fixed: F252, commit 5ca15a7, deployed in cycle 121 (2026-09-11 17:39 UTC)

A receipt is recorded whenever the validator's own work differs from the network's, or the network's trusted validations reached it short of quorum. One ledger flagged by several steps is one receipt. Dispositions: fixed (with the finding, commit and deployment), explained (not a defect, with the reason), or open. Receipt and incident IDs are numbered per report: R-01 here is R-2026-09-11-01, INC-01 is INC-2026-09-11-01. Times are not shown where the reference node no longer holds the ledger.

145 more receipts (#106,908,490–#106,921,848) are in the record and not listed individually; their dispositions: 13 fixed, 132 no disposition recorded.

Incidents

Not assessed: no signing records for this day.

Change log

Deployments

Cycle	Main	Deployed	Test suites	Replay windows	Post-deploy health	Soak
121	`59cfa22`	17:39:53 UTC	n/a	n/a	404 matched, 0 mismatched	#1 from 17:39 UTC: ended early: superseded by the next deployment (2026-09-12 03:03 UTC)
122	`55bc125`	03:03:20 UTC	n/a	n/a	415 matched, 0 mismatched	#2 from 03:03 UTC: ended early: superseded by the next deployment (2026-09-13 05:42 UTC)

Cycle 122 delivered: `6d2a42e` fix(xrpl-ledger): F264 — DepositPreauth(Authorize) counts against the creator's owner reserve; `55bc125` fix(xrpl-ledger): F265 — redeeming an IOU to its issuer reads the holding through IgnoreFreeze; a frozen holder can still pay the gateway back

Each deployment passes the unit and port test suites and replays mainnet history windows with zero mismatches before it ships, is health-checked after it starts, and then soaks for 24 hours.

Merged into main

Merged	Repo	Commit	Subject
05:07 UTC	xrpl-validator	`5de9f43`	fix(xrpl-ledger): F251 — a bridged leg's rev extent reaps only after a CLOB-served pass; a pool-served pass never steps onto the book
06:18 UTC	xrpl-validator	`5ca15a7`	fix(xrpl-ledger): F252 — a strand that builds but flows nothing is tecPATH_PARTIAL without tfPartialPayment; only a strand that fails to build is tecPATH_DRY
06:18 UTC	xrpl-validator	`fd60afd`	fix(xrpl-ledger): F253 — the AccountTxnID stamp answers the field's presence before do_apply; the AccountSet that arms it lands the zero hash
08:28 UTC	xrpl-validator	`f5cef49`	fix(xrpl-ledger): F254 — AMMDeposit's per-amount requireAuth is the Legacy check; no line to a permissive issuer is tecUNFUNDED_AMM, not tecNO_LINE
08:28 UTC	xrpl-validator	`7ed1439`	fix(xrpl-ledger): F255 — an IOU hop whose source holds nothing, or whose destination sits at its limit, is tecPATH_DRY at strand build; only the XRP endpoint is a flow-time zero
09:39 UTC	xrpl-validator	`7263d48`	fix(xrpl-ledger): F256 — the last LP redeeming its whole position by tfLPToken tears the AMM down
10:49 UTC	xrpl-validator	`5bfb88c`	fix(xrpl-ledger): F258 — IOU value strings spell like the decoder (STAmount::getText), and threading compares amounts as numbers
12:01 UTC	xrpl-validator	`5cb9280`	fix(xrpl-ledger): F257 — a bridged leg's single-path upper bound is the anchored pool offer's quality, not the book tip's
13:48 UTC	xrpl-validator	`703df39`	feat(xrpl-ledger): F259 — fixCleanup3_3_0 is live; read amendment state from the ledger and apply its AMM deposit/withdraw rules
14:56 UTC	xrpl-validator	`a967bac`	fix(xrpl-ledger): F260 — a taker crossing its own offer moves nothing on the line; only the flow's remainingIn falls

Merged	Repo	Commit	Subject
16:19 UTC	xrpl-validator	`453e1ca`	fix(xrpl-ledger): F262 — a trust limit filed at STAmount's ceiling is not a 0.034 cap; limit − held is an IOUAmount subtraction
16:28 UTC	xrpl-validator	`59cfa22`	test(xrpl-node): repair the F260/F262 merge in payment_flow_vector — the self-cross test lost its closing brace
01:48 UTC	xrpl-validator	`55bc125`	fix(xrpl-ledger): F265 — redeeming an IOU to its issuer reads the holding through IgnoreFreeze; a frozen holder can still pay the gateway back
01:48 UTC	xrpl-validator	`6d2a42e`	fix(xrpl-ledger): F264 — DepositPreauth(Authorize) counts against the creator's owner reserve

Findings fixed

- **fix(xrpl-ledger): F251 — a bridged leg's rev extent reaps only after a CLOB-served pass; a pool-served pass never steps onto the book** (`5de9f43` , xrpl-validator) Finding 239 gave leg B of a bridged crossing rippled's rev-pass reach — after consuming a level, the stream steps on, removing the expired and unfunded offers it lands on until the first live one. Finding 244 withdrew it: on #106873753 C4FEF57142AA (rMsXVzCug7's tfPassive BTC→RLUSD offer, which crosses nothing) the extent removed rLDyWWMiW6's dead EE68DEE8 and its pages, four ledgers running, while mainnet left …
- **fix(xrpl-ledger): F252 — a strand that builds but flows nothing is tecPATH_PARTIAL without tfPartialPayment; only a strand that fails to build is tecPATH_DRY** (`5ca15a7` , xrpl-validator) Five flow-time zero guards in payment.rs answered tecPATH_DRY whatever the flags said: the sender holds nothing of the SendMax asset, the destination can receive nothing (at or over its trust limit), nothing lands after the transfer rate. rippled 3.3.0 judges the flag first — StrandFlow.h:812-827 `if (actualOut != outReq) { if (!partialPayment) return tecPATH_PARTIAL; else if (actualOut == 0) return tecPATH_DRY; }` …
- **fix(xrpl-ledger): F253 — the AccountTxnID stamp answers the field's presence before do_apply; the AccountSet that arms it lands the zero hash** (`fd60afd` , xrpl-validator) rippled writes the sender's AccountTxnID in Transactor::apply, AHEAD of doApply (Transactor.cpp:906, `if (sle->isFieldPresent(sfAccountTxnID)) sle->setFieldH256(sfAccountTxnID, ctx_.tx.getTransactionID())`). An AccountSet with SetFlag 5 then creates the field in doApply by `makeFieldPresent` (AccountSet.cpp:380-383) — the zero hash — so the arming transaction is never itself recorded; the next one is.
- **fix(xrpl-ledger): F254 — AMMDeposit's per-amount requireAuth is the Legacy check; no line to a permissive issuer is tecUNFUNDED_AMM, not tecNO_LINE** (`f5cef49` , xrpl-validator) AMMDeposit::preclaim's `checkAmount` (AMMDeposit.cpp:321, rippled 3.3.0) calls `requireAuth(ctx.view, amount->asset(), accountID)` with the DEFAULT AuthType::Legacy (TokenHelpers.h:340). For an IOU that means (RippleStateHelpers.cpp requireAuth): a missing line is tecNO_LINE only when the issuer has lsfRequireAuth; a permissive issuer passes, and the `balance` lambda then finds `accountFunds` = 0 and answers …
- **fix(xrpl-ledger): F255 — an IOU hop whose source holds nothing, or whose destination sits at its limit, is tecPATH_DRY at strand build; only the XRP endpoint is a flow-time zero** (`7ed1439` , xrpl-validator) Finding 252 turned five flow-time zero guards partial-aware on the strength of StrandFlow.h's ordering. Three of them are not flow-time. A DirectIPaymentStep's `check` (DirectStep.cpp:450-460, rippled 3.3.0) judges the hop at strand BUILD: `owed = creditBalance(dst, src); if (owed <= 0 && -owed >= creditLimit(dst, src)) return tecPATH_DRY` — the step's source holds nothing of the counterparty's IOU and the …

- **fix(xrpl-ledger): F256 — the last LP redeeming its whole position by tfLPToken tears the AMM down** (`7263d48`, xrpl-validator) A tfLPToken withdrawal whose LPTokenIn equals the pool's LPTokenBalance is rippled's full withdrawal (AMMWithdraw.cpp:852: both balances paid out whole), and `deleteAMMAccountIfEmpty` (:800-820) then deletes the pool's trust lines, the AMM object, its owner directory and the pool account once the new LPTokenBalance is zero. Our tfWithdrawAll arm already did that (#106430239); the tfLPToken path shares the general …
- **fix(xrpl-ledger): F258 — IOU value strings spell like the decoder (STAmount::getText), and threading compares amounts as numbers** (`5bfb88c`, xrpl-validator) `me_to_value_string` printed every non-negative exponent as decimal with at most 40 zeros, so any amount above 1e56 was silently rewritten as 1e-40 of itself the moment the engine re-serialised the object holding it. STAmount's exponent runs to +80 — a 16-digit mantissa makes 9999999999999999e80 — and mainnet's gateway "bridge" offers are sized exactly there.
- **fix(xrpl-ledger): F257 — a bridged leg's single-path upper bound is the anchored pool offer's quality, not the book tip's** (`5cb9280`, xrpl-validator) rippled admits a strand by `qualityUpperBound`, and for a BookStep whose pool is live that is `tip()` = `getOffer(lobQuality)`: the offer `changeSpotPriceQuality` sizes AGAINST the book tip, whose average quality sits between the pool's spot and the tip (AMMLiquidity.cpp:184-222). Only the fixAMMv1_1 qualityThreshold override — or an empty book — hands it the spot. Finding 99 gave the direct walk that rule …
- **feat(xrpl-ledger): F259 — fixCleanup3_3_0 is live; read amendment state from the ledger and apply its AMM deposit/withdraw rules** (`703df39`, xrpl-validator) fixCleanup3_3_0 was enabled on mainnet at flag ledger 106912768 (2026-09-11) with deploy117 already running. The engine had no notion of amendment state — it hard-coded the pre-amendment rules it had specimens for — so it now reads the ledger's Amendments singleton (keylet 7DB0788C…, sfAmendments), rippled's `Rules::enabled`. A state without the singleton (a bundle drill's seated pre-images, a synthetic test ledger) …
- **fix(xrpl-ledger): F260 — a taker crossing its own offer moves nothing on the line; only the flow's remainingIn falls** (`a967bac`, xrpl-validator) rippled's `accountSendIOU` returns before touching anything when the sender is the receiver (TokenHelpers.cpp:1451), transfer fee included. A payment that crosses the sender's OWN offer therefore leaves the sender's line exactly where it was, while the strand's actualIn still counts against remainingIn (StrandFlow.h). The direct walk credited the maker per fill and debited the taker once at pass end — the same line, …
- **fix(xrpl-ledger): F262 — a trust limit filed at STAmount's ceiling is not a 0.034 cap; limit − held is an IOUAmount subtraction** (`453e1ca`, xrpl-validator) `dest_receivable` (the strand's last-step ceiling, DirectStep.cpp:476-488) and `max_src_to_dst` computed "limit − held" with `me_sub`, which rescales the limit to the holding's exponent through `me_rescale` — capped at 38 orders and SATURATING. rapido files its limits at STAmount's ceiling, 9999999999999999e79; against a 1e-25 holding that is 104 orders, the limit became u128::MAX and the room …
- **fix(xrpl-ledger): F265 — redeeming an IOU to its issuer reads the holding through IgnoreFreeze; a frozen holder can still pay the gateway back** (`55bc125`, xrpl-validator) Paying the issuer is a one-step strand. rippled sizes a DirectStepI from `accountHolds(…, FreezeHandling::IgnoreFreeze)` (DirectStep.cpp maxPaymentFlow) and enforces freezes at strand build with `checkFreeze`, which a one-step strand skips — "pure issue/redeem can't be frozen". Our `available` reads holders through fhZERO_IF_FROZEN — right for offer funding and for the two-step strand, whose `hop_frozen_parts` …
- **fix(xrpl-ledger): F264 — DepositPreauth(Authorize) counts against the creator's owner reserve** (`6d2a42e`, xrpl-validator) rippled's DepositPreauth::doApply runs `checkReserve(sleOwner, preFeeBalance_,`

`{ownerCountDelta = 1})` before creating the entry (DepositPreauth.cpp:168-173): the balance BEFORE the fee must cover the reserve at OwnerCount + 1, so the fee may dip into the reserve but the new object may not. We created the entry unconditionally.

Tests and campaigns

- **test(xrpl-node): repair the F260/F262 merge in payment_flow_vector — the self-cross test lost its closing brace** (`59cfa22` , xrpl-validator)

Independence program

No independence record for UTC day 2026-09-11; records begin 2026-10-20.

Network

No ledger records for this day: the reference node holds ledgers from 2026-10-04 22:52 UTC (#107,436,647).

Amendment watch

Carried over unchanged from the original report, which read it from the XRP Ledger when it was generated; the reference node no longer holds this day's ledgers.

Read from the XRP Ledger: the Amendments object as of the last ledger of the day, and the day's EnableAmendment pseudo-transactions.

Voting events:

- fixCleanup3_3_0 was enabled — ledger 106,911,489, 2026-09-11 11:29 UTC

No amendment held a majority.

Amendments enabled on mainnet: 94.

Corrections to earlier reports

None.

XRPL research

Automated research — candidate amendment ideas

Ideas generated and prior-art-checked by the XRPL Amendment Board, an automated research tool (read-only board: iceland.halcyon-names.io). They are exploration leads, not proposals.

- **Per-Signer-List Spend Policies** (accounts) Add a new owner-reserved `SignerListPolicy` SLE (keylet::signerListPolicy(account, signerListID)) settable via an optional payload on SignerListSet, c
- **Atomic NAV-Priced Fund Redemption** (rwa) Add a `FundNAV` ledger object (owner-reserved by the fund issuer, keylet::fundNAV(issuanceID)) holding sfNAVPerShare, sfNAVSequence, and sfSettlementA
- **Bridge-Attested Wrapped Assets & Messages** (interop) Extend the existing XChainClaimAttestation template with an optional bounded sfBridgeMessage (≤1KB) and sfMPTIssuanceID field, so a witness-attested X

Appendix — commits

Committed	Merged into main	Repo	Commit	Subject
09-11 03:59	09-11 05:07	xrpl-validator	`5de9f43`	fix(xrpl-ledger): F251 — a bridged leg's rev extent reaps only after a CLOB-served pass; a pool-served pass never steps onto the book
09-11 05:50	09-11 06:18	xrpl-validator	`5ca15a7`	fix(xrpl-ledger): F252 — a strand that builds but flows nothing is tecPATH_PARTIAL without tfPartialPayment; only a strand that fails to build is tecPATH_DRY
09-11 05:58	09-11 06:18	xrpl-validator	`fd60afd`	fix(xrpl-ledger): F253 — the AccountTxnID stamp answers the field's presence before do_apply; the AccountSet that arms it lands the zero hash
09-11 08:18	09-11 08:28	xrpl-validator	`f5cef49`	fix(xrpl-ledger): F254 — AMMDeposit's per-amount requireAuth is the Legacy check; no line to a permissive issuer is tecUNFUNDED_AMM, not tecNO_LINE
09-11 08:28	09-11 08:28	xrpl-validator	`7ed1439`	fix(xrpl-ledger): F255 — an IOU hop whose source holds nothing, or whose destination sits at its limit, is tecPATH_DRY at strand build; only the XRP endpoint is a flow-time zero
09-11 09:26	09-11 09:39	xrpl-validator	`7263d48`	fix(xrpl-ledger): F256 — the last LP redeeming its whole position by tfLPToken tears the AMM down
09-11 10:49	09-11 10:49	xrpl-validator	`5bfb88c`	fix(xrpl-ledger): F258 — IOU value strings spell like the decoder (STAmount::getText), and threading compares amounts as numbers
09-11 12:01	09-11 12:01	xrpl-validator	`5cb9280`	fix(xrpl-ledger): F257 — a bridged leg's single-path upper bound is the anchored pool offer's quality, not the book tip's
09-11 13:48	09-11 13:48	xrpl-validator	`703df39`	feat(xrpl-ledger): F259 — fixCleanup3_3_0 is live; read amendment state from the ledger and apply its AMM deposit/withdraw rules
09-11 14:19	09-11 14:56	xrpl-validator	`a967bac`	fix(xrpl-ledger): F260 — a taker crossing its own offer moves nothing on the line; only the flow's remainingIn falls

Committed	Merged into main	Repo	Commit	Subject
09-11 16:19	09-11 16:19	xrpl-validator	`453e1ca`	fix(xrpl-ledger): F262 — a trust limit filed at STAmount's ceiling is not a 0.034 cap; limit − held is an IOUAmount subtraction
09-11 16:28	09-11 16:28	xrpl-validator	`59cfa22`	test(xrpl-node): repair the F260/F262 merge in payment_flow_vector — the self-cross test lost its closing brace
09-12 01:48	09-12 01:48	xrpl-validator	`55bc125`	fix(xrpl-ledger): F265 — redeeming an IOU to its issuer reads the holding through IgnoreFreeze; a frozen holder can still pay the gateway back
09-12 01:48	09-12 01:48	xrpl-validator	`6d2a42e`	fix(xrpl-ledger): F264 — DepositPreauth(Authorize) counts against the creator's owner reserve

Times in UTC. A commit appears on the day it was committed to main or merged into it.
